The increase in 2009 annual adjusted earnings were attributable to two primary drivers:

- 1) cost efficiencies throughout the organization; and
- 2) higher utility investment in rate base.

During 2009, the Utilities Segment invested \$776.1 million in new infrastructure in Alberta. Earnings in the Utilities Segment also improved in 2009 due to the impact of the ATCO Pipelines negotiated settlement decision for 2008 and 2009. Earnings in the Energy Segment were lower than 2008 primarily due to lower power prices and related spark spreads in the Alberta electricity market for ATCO Power and ATCO Resources. ATCO Structures & Logistics experienced higher earnings in 2009 primarily as a result of earnings from its Saadiyat Island Project in the United Arab Emirates, increased manufacturing activities in South America and increased activities relating to its lodging operations and Kandahar projects.

The increase in fourth quarter adjusted earnings was primarily attributable to the Utilities Segment. The earnings growth in this segment was due to the impact of the 2009 Generic Cost of Capital Decision, higher utility investment in rate base and cost efficiencies related to operating and maintenance expense. Adjusted earnings in the Energy Segment were essentially unchanged. Improvements in ATCO Midstream's natural gas storage earnings were partially offset by lower earnings in ATCO Power and ATCO Resources due to lower power prices and related spark spreads in the Alberta electricity market.

ATCO Ltd.'s cash position at December 31, 2009 was \$1.0 billion compared to \$0.8 billion at December 31, 2008. This increase in cash occurred during a year in which capital expenditures were \$1.0 billion compared to \$1.1 billion in 2008.
